Portfolio: nguyencong99dev.github.io/my_portfolio/

PROFESSIONAL SUMMARY

Unity Game Developer (C#) with 2+ years of professional software engineering experience on large-scale enterprise projects (47-member team), now focused on game systems programming. Building Mo-Li, a turn-based monster-collection RPG in Unity featuring event-driven architecture, data-driven design with ScriptableObjects, and a combat system based on State Pattern and Command Pattern. Experienced in production debugging, system integration, and cross-team collaboration. Also create pixel art (Aseprite) and design combat UI/UX, enabling effective collaboration with Design and Art teams.

TECHNICAL SKILLS

- **Game Development:** Unity Engine, C#, 2D Game Development, ScriptableObjects, Addressables, Animator, Unity UI, Aseprite
- **Architecture and Design Patterns:** Event-Driven Architecture (EventBus), State Pattern, Command Pattern, Strategy Pattern, Object Pooling, Data-Driven Design
- **Web/Backend:** TypeScript, Angular, Node.js, Express.js, MongoDB, SQL
- **Tools and Version Control:** Git, GitHub, Docker, Postman
- **Other:** SAP ABAP
- **Languages:** English (B1)

PROJECTS

Mo-Li: Turn-Based Monster-Collection RPG

Tech: Unity, C# | 02/2026 - Present | github.com/nguyencong99dev/Mo-Li-Project

- Architected the game core: asynchronous Bootstrapper boot sequence, persistent manager layer (Assets, Audio, Input, Scene, Save), and World/Combat scene separation.
- Implemented a generic EventBus with struct events and last-value replay to decouple UI and gameplay systems (event-driven architecture).
- Built turn-based combat using State Pattern with sub-states for player input (select action, select target, confirm); modeled skill, item and flee actions with Command Pattern, executed by an asynchronous ActionQueue with priority insertion for reactions (e.g., Faint) and reentrancy protection.
- Designed a data-driven content pipeline: ScriptableObjects for monsters, skills and items loaded via Addressables; polymorphic effect system (SerializeReference, Strategy Pattern) shared by skills and consumables; Flags enum for single-target and area-of-effect targeting.
- Developed a JSON save system (3 slots) with an ISaveable registry, and a generic object pool (IPoolable) for combat UI.
- Created sprite art in Aseprite and designed combat UI/UX (turn-order queue, unit cards, cooldown vs. insufficient-MP states).
- Used feature and develop branches with pull requests on GitHub.

E-Commerce Web System with Personalized Recommendation (Graduation Project)

Tech: Angular, Express.js, MongoDB | 08/2023 - 02/2024 | github.com/nguyencong99dev/DATN_FE

- Developed a full-stack e-commerce system with authentication, cart, order management and product management.
- Implemented a Neighborhood-Based Collaborative Filtering recommendation model from scratch in TypeScript, without ML libraries, using a custom dataset built from user behavior (purchase history, ratings).
- Integrated the recommendation feature into the backend to deliver personalized product suggestions for each user.

WORK EXPERIENCE

Software Engineer (SAP Technical Consultant)

FPT Software | 02/2023 - 04/2025 | Full-time

- Worked in a 47-member project team migrating a large-scale enterprise system; collaborated across teams on complex system architecture.
- Designed and implemented system integrations between multiple platforms using SAP PI/PO and IDoc interfaces, with a focus on data flow and system communication.
- Built and extended UI components, tested for responsiveness and accessibility across enterprise applications.
- Developed custom business logic and enhancements from requirements; debugged and resolved issues in production environments.
- Worked closely with functional teams to translate business requirements into technical solutions.

Angular Developer

FPT Software | 08/2022 - 02/2023 | Full-time

- Developed and maintained web applications using Angular.
- Implemented responsive UI with routing, navigation and component architecture.
- Integrated RESTful APIs into frontend applications.
- Tested and debugged within an Agile team.

EDUCATION

Bachelor of Information Technology

University of Transport and Communications 2 - Ho Chi Minh City | Graduated: 03/2024
